

ABHISHEK SHARMA

AVP – Technology | Technical Product Manager | Mobile & Full-Stack Engineering Leader

Hyderabad, India | +91 98112 83725 | abhisheksharma.dsc@gmail.com | linkedin.com/in/abhishekmca | github.com/abhishek1504

PROFESSIONAL SUMMARY

Engineering and product leader with 17+ years of experience building and shipping mobile and web products across fintech, ecommerce, retail, logistics, and QSR domains. Currently AVP at Gajigesha (Kredivo Group), owning product development, UX design, and engineering optimization for a consumer fintech platform running on AWS (EC2, S3, CloudFront, RDS with Multi-AZ read replicas). Proven track record of leading cross-functional teams, founding mobility practices, delivering multi-tenant applications for global brands (KFC, Kohl's, Hindustan Unilever), and managing end-to-end delivery from roadmap to release. Recently upskilled in Generative AI and Agentic AI (PGCP, IIT Roorkee) with hands-on Anthropic Claude platform certifications and applied LangChain / LangGraph experience; actively building AI-assisted engineering workflows.

CORE SKILLS

Leadership & Product: Technical Product Management, Product Roadmap & Strategy, UX Design, Agile/Scrum Delivery, Team Building & Mentoring, Vendor & Stakeholder Management, Cross-Functional Leadership

Mobile & Frontend: React Native, React.js, Kotlin (Native Android), JavaScript, TypeScript, Appcelerator Titanium, Objective-C, Multi-Tenant App Architecture, Monorepo / Shared NPM Libraries

Backend & Data: Node.js, Java (Spring Boot), Python, REST APIs, Ruby on Rails, ASP.NET, PostgreSQL, Firebird, SQL

Cloud & DevOps: AWS (EC2, S3, CloudFront, RDS – Multi-AZ Read Replicas), GCP (Compute Engine), CI/CD, GitHub Actions, Release Management

AI & Emerging Tech: Generative AI, Agentic AI, LLM API Integration (Anthropic Claude, OpenAI), LangChain, LangGraph, Multi-Step Agent Orchestration, Tool/Function Calling, Prompt Engineering, Claude Code, AI-Powered Automation Pipelines

PROFESSIONAL EXPERIENCE

Assistant Vice President (AVP) – Technical Product Manager

Oct 2022 – Present

Gajigesha (acquired by Kredivo Group) | Remote / Jakarta, Indonesia

- Own the end-to-end product lifecycle — product development, UX design, and performance optimization — for a consumer fintech platform, reporting directly to the Head of Engineering.
- Drive delivery across a React / React Native front end and Node.js backend on AWS infrastructure, with CI/CD pipelines on GitHub Actions.
- Work hands-on with the platform's core AWS stack — EC2 for application hosting, S3 for object/asset storage, CloudFront for CDN-based content delivery, and RDS with Multi-AZ read replicas for scalable, highly available data access.
- Bridge business and engineering: translate product strategy into technical roadmaps, prioritize backlogs, and align stakeholders across product, design, and engineering.
- Achieved and sustained 99.5% crash-free users and an Apdex score of 0.9 through app performance optimization, monitoring, and release quality initiatives.

Head of Mobility

May 2022 – Sep 2022

Integrum Solutions

- Spearheaded the mobile application development practice; delivered 2 production React Native applications within a 4-month window.
- Managed vendor resourcing and external engineering partners, ensuring on-time, on-quality delivery.

Manager – Web Engineering

Sep 2021 – May 2022

Capgemini

- Designed and developed a reusable React.js component library, standardizing UI development and accelerating build time across multiple client web projects.

Senior Associate – Projects

Feb 2016 – Aug 2021

Cognizant Technology Solutions

- KFC: Built a multi-tenant web and mobile application targeting multiple countries (India, Australia) — React web app, React Native mobile app, with shared business logic distributed as internal NPM libraries.
- Kohl's (Retail): Developed a native Android (Kotlin) inventory management app for Zebra OEM enterprise devices, used by store employees to scan and manage inbound inventory.
- Tractor Supply Company (E-commerce): Maintained and enhanced a React Native consumer shopping app in collaboration with Infosys, serving American farm and hardware customers.
- Wallenius Wilhelmsen (Logistics): Single-handedly developed a driver-facing app (Appcelerator Titanium) for shipment pickup and delivery — VIN scanning, proof-of-delivery, and digital signature capture.

Senior Software Engineer

2013 – 2016

Accrete Solutions LLC | Gurugram

- Migrated an enterprise field-service iPad application from Objective-C to Appcelerator Titanium, extending it to a cross-platform codebase.
- Built B2B customer-data synchronization services integrating with third-party platforms using Ruby on Rails.

Senior Software Engineer

2011 – 2012

OTS Solutions | Gurugram

- Developed iPhone applications on Delphi Prism and laid the foundation of the company's mobility team.
- Led a team of engineers to adopt Appcelerator Titanium with ASP.NET backends, delivering client mobile projects end to end.

Software Engineer – Delivery

2010 – 2011

Ma Foi Consulting

- Owned the payroll product from engineering through client delivery, resolving month-on-month client queries and production issues.
- Single-handedly managed payroll processing delivery for 80 units of Hindustan Unilever (HUL).

Software Programmer

2008 – 2010

Topsys Solutions | Bengaluru

- Developed new features and maintained the core salary-processing engine of a desktop payroll product (Delphi 5.0, Firebird DB) used by HR teams at ING Vysya Bank, Kamat Yatri Nivas, and other enterprise clients.

PROJECTS

Chess-Pipeline — AI-Powered Content Automation

github.com/abhishek1504/chess-pipeline

- Designed and built a fully automated, zero-touch content pipeline in Python that fetches won games from the Chess.com API, renders them into videos, generates metadata with AI, and publishes to YouTube daily — powering the "The Thinking Athlete" chess channel.
- Integrated the Anthropic Claude API to auto-generate YouTube titles, descriptions, and hashtags; used the YouTube Data API (OAuth 2.0) for uploads, playlist management, and cross-linking.
- Engineered dual-format video rendering (1280x720 full-game landscape + 1080x1920 Shorts of the last 20 moves) with move-synced audio using FFmpeg/imageio, plus a quality-scoring filter that only publishes games with an accuracy proxy score ≥ 70 .
- Automated end to end on GitHub Actions with scheduled daily runs (new wins + chronological historical backfill), secrets-based auth, and a persistent upload log committed to the repo for idempotent, duplicate-free publishing.

LangChain & LangGraph Demos — Agentic Workflow Patterns

github.com/abhishek1504/langchain_langgraph_demo

- Built hands-on demos in LangChain and LangGraph to prototype core agentic AI design patterns — prompt-chained LLM calls, typed state management, and conditional graph-based orchestration.
- Modeled a multi-step recruiting workflow as a LangGraph StateGraph: one node categorizes candidate experience level, a second assesses skill match against the job description, and conditional edges route the candidate to HR interview, recruiter escalation, or rejection based on graph state.
- Used LangChain's ChatPromptTemplate and ChatOpenAI integration for structured, reusable prompt chains — complementing the tool-calling patterns used in the Employee Agent and Chess-Pipeline projects.

Spring Boot Microservices — Reference Architecture

- Built a Java Spring Boot microservices reference architecture, decomposing a backend system into independently deployable services communicating over REST, to evaluate service-boundary and API design patterns beyond the Node.js stack used at work.
- Deployed and hosted the services on Google Cloud Platform (Compute Engine); the architecture maps directly to an equivalent AWS deployment (EC2, RDS, S3, CloudFront), complementing existing AWS infrastructure experience from current role.

Employee Agent — AI-Powered HR Support Assistant

- Built an AI agent that resolves employee queries about failed withdrawal requests: takes a free-text question, passes it to OpenAI along with a defined list of callable tools, and returns a natural-language answer.
- Implemented each capability as an individual Python tool function (e.g., `unable_to_withdraw.py`) that queries a PostgreSQL database directly, keeping business logic decoupled from the LLM and each tool independently testable.
- Designed the tool-calling flow end to end: user query → OpenAI selects and invokes the relevant tool → tool runs a targeted Postgres query → result is returned to the model → grounded, data-backed response is sent to the employee.

EDUCATION

PGCP in Generative AI & Agentic AI — IIT Roorkee (with Futureense)

2025 – 2026

MCA — H.N.B. Garhwal University, IMS Dehradun

2005 – 2008

B.Sc. (Hons) Mathematics — University of Delhi

2002 – 2005

CERTIFICATIONS

- Claude Code in Action — Anthropic (Jul 2026, ID: j3bvpme8thxb)
- Claude 101, Claude Code 101, Claude Platform 101 — Anthropic (Jun 2026)
- AI & ML — IIT Hyderabad Tinkerers' Lab (Mar 2025, ID: 5GXW6K24XPWWKBU)
- UX Design with AI — IIT Hyderabad Tinkerers' Lab (Mar 2025, ID: B69RYEL86h4yl2j)
- Kony Certified Developer (Jul 2016, ID: KCD04271671692)
